APPENDICES

ศูนย์วิทยทรัพยากร
จุฬาลงกรณ์มหาวิทยาลัย

APPENDIX A

CALCULATION OF CATALYST PREPARATION

Molybdenum Impregnation

Let the amount of Mo into catalyst = 8 wt%

The catalyst used = X g

So that : from the equation

$$\text{Mo} / (X + \text{Mo}) = 8/100$$

$$100 \times \text{Mo} = 8 \times (X + \text{Mo})$$

$$(100 - 8) \times \text{Mo} = 8 \times X$$

$$\text{thus} \quad \text{Mo} = (8 \times X) / (100 - 8) \text{ g}$$

use $(\text{NH}_4)_6\text{Mo}_7\text{O}_{24} \cdot 4\text{H}_2\text{O}$ (molecular weight = 1235.86, Mo = 95.94 g)

Weight of $(\text{NH}_4)_6\text{Mo}_7\text{O}_{24} \cdot 4\text{H}_2\text{O} = [8 \times X / (100 - 8)] \times [1235.86 / (95.94 \times 7)] \text{ g}$

Notes NH₄ZSM-5 0.7 g : Distilled water 0.45 ml

HY 0.7 g : Distilled water 0.7 ml

APPENDIX B

SAMPLE OF CALCULATIONS

Calculation of GHSV of methane

The catalyst used = 0.2 g.

packed catalyst into stainless steel reactor (inside diameter = 0.75 cm.)

determine the average high of catalyst bed = H cm. So that,

$$\text{GHSV (h}^{-1}\text{)} = \frac{\text{Volumetric flow rate}^1 (\text{cc/min})}{\text{Volume of bed (cc-cat)}}$$

at STP condition :

$$\text{Volumetric flow rate} = \frac{\text{Volumetric flow rate}^1 \times (273.15 + T)}{273.15}$$

$$\text{Volume of bed} = \pi \times (0.3)^2 \times h \text{ cc-cat.}$$

where T = room temperature, °C.

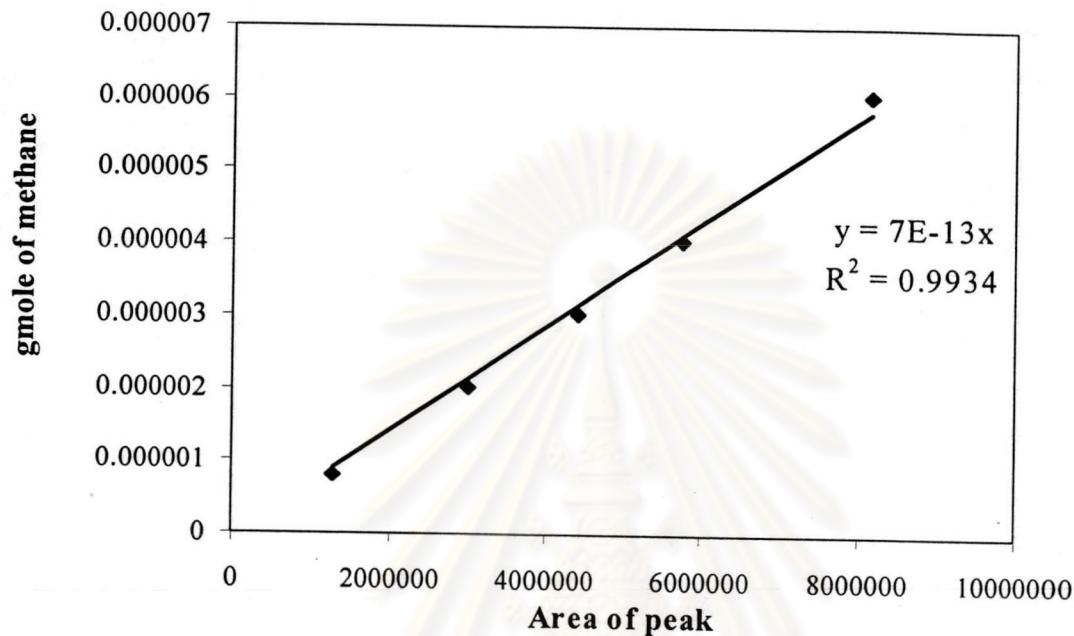

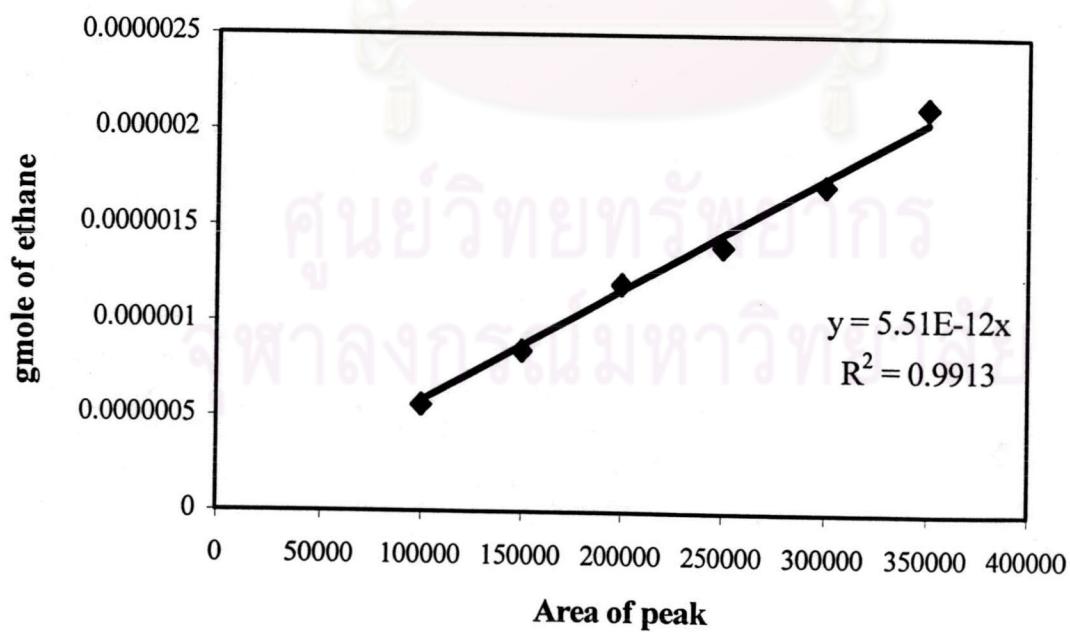

APPENDIX C

CALIBRATION CURVE

Flame ionization detector gas chromatographs, model 14A and 14B, were used to analyze the concentrations of hydrocarbons. Benzene were analyzed by GC model 14A while methane, ethane, and ethylene were analyzed by GC model 14B.

Gas chromatograph with the thermal conductivity detector, model 8A, was used to analyze the concentration of CO₂ and CO by using Porapak-Q and Molecular Sieve 5-A column, respectively.

The calibration curves of methane, ethane, ethylene, benzene, CO₂, and CO are illustrated in the following figures.

Calibration curve**Figure C1** Calibration curve of methane**Figure C2** Calibration curve of ethane

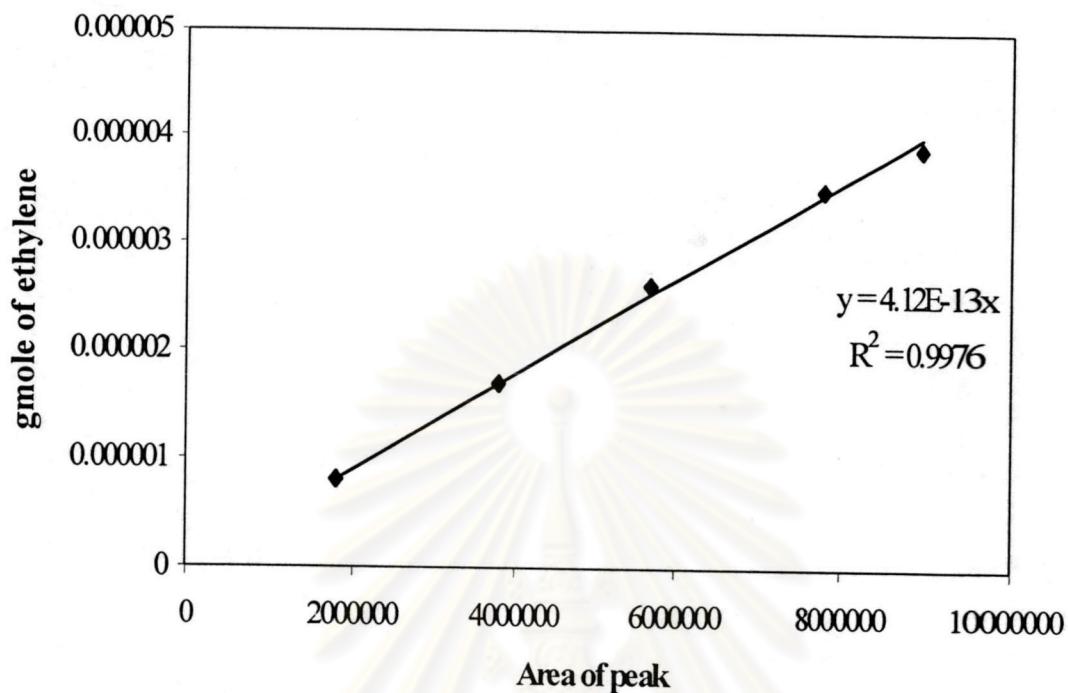

Figure C3 Calibration curve of ethylene

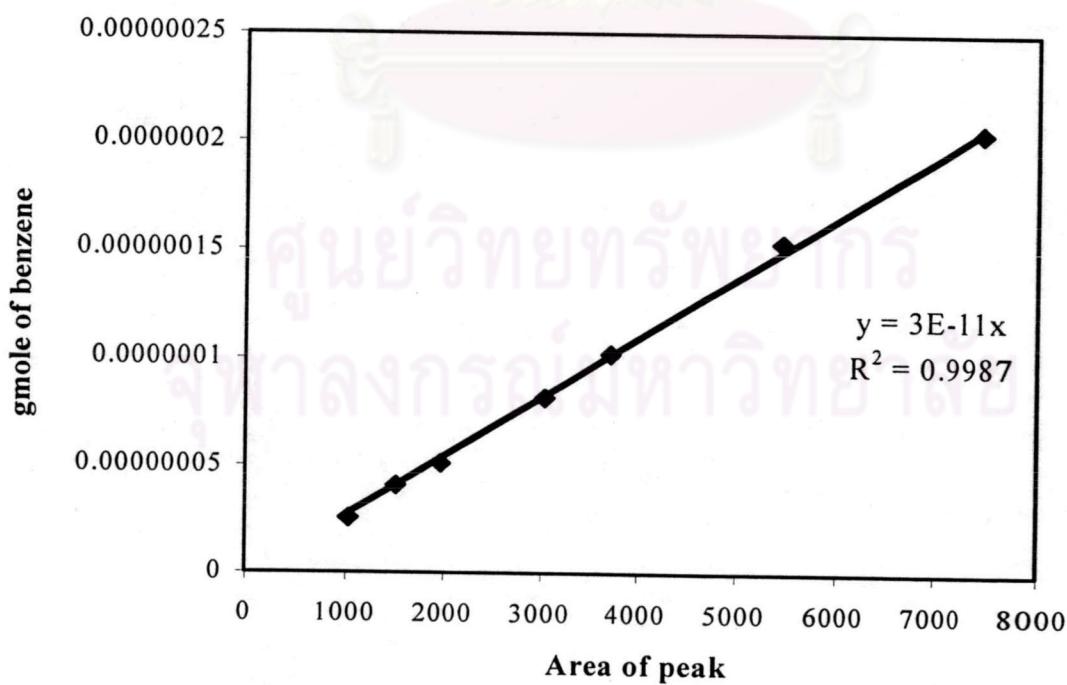

Figure C4 Calibration curve of benzene

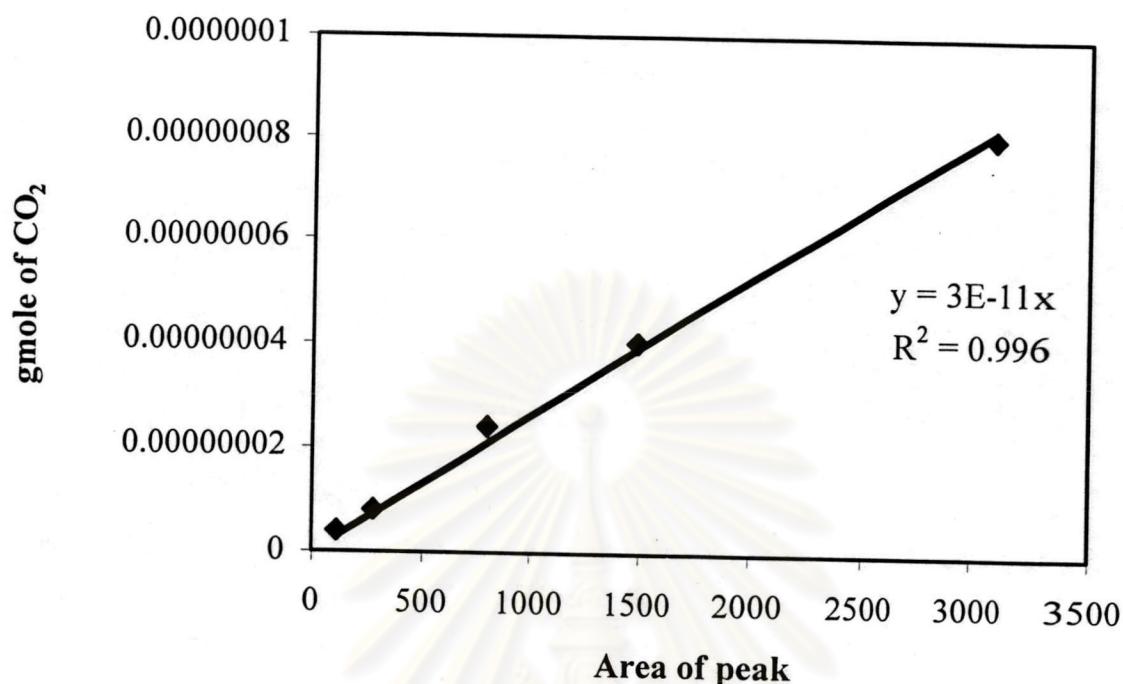

Figure C5 Calibration curve of CO_2

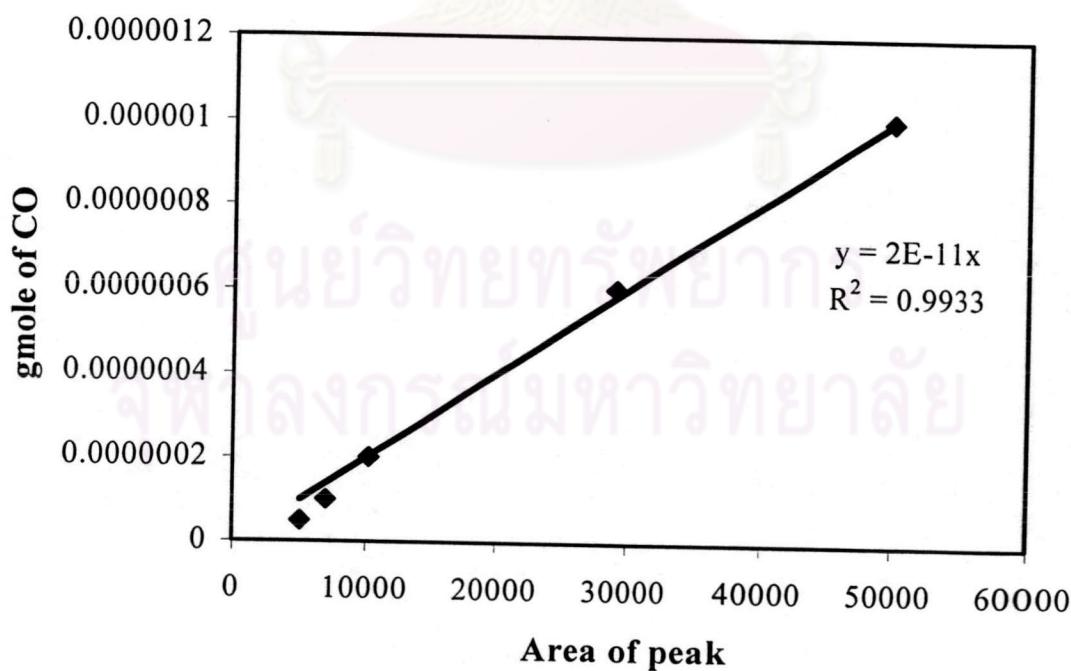

Figure C6 Calibration curve of CO

VITA

Miss Araya Kittivanichawat was born on October 5, 1976 in Bangkok, Thailand. She received the Bachelor's Degree of Science from the Department of Chemistry, Faculty of Science, King Mongkut's Institute of Technology Ladkrabang (KMITL) in 1998. She continued her Master's Study at Chulalongkorn University in June, 1998.
