Preparation of Protein Evaluation Basal Diet

(43)

Sample

X*

Cottonseed oil	8 -	X x % ether extract
		100

Salt mixture USP	5 -	X x % ash
		100

Vitamin mixture

1

Cellulose	1 -	X x % crude fiber
		100

Water	5 -	X x % moisture
		100

Sucrose or corn starch, to make 100

$$X^* = \frac{1.60 \times 100}{\% \text{ N of sample}}$$

Salt Mixture USP - (43) Both USP salt mixture and salt

mixture having essentially same proportions of the elements
 Preparation USP xix salt mixture as follows : Grind in mortar portion
 of 193.3 g NaCl with 0.79 g KI. Similarly grind together remainder
 of the NaCl with 389.0 g KH₂PO₄, 57.3 g MgSO₄ anhydrous., 381.4 g
 CaCO₃, 27.0 g FeSO₄.7H₂O, 4.01 g MnSO₄.H₂O, 0.548 g ZnSO₄.7H₂O,
 0.477 g CuSO₄.5 H₂O, and 0.023 g CoCl₂.6H₂O, finally adding the NaCl -
 KI mixture. Reduce entire mixture to fine powder.

Vitamin Mixture

(43)

	mg/100 g
	ration
Vitamin A (dry, stabilized)	2000 (IU)
Vitamin D (dry, stabilized)	200 (IU)
Vitamin E (dry, stabilized)	10 (IU)
Menadione	0.5
Choline	200
p - Aminobenzoic acid	10
Inositol	10
Niacin	4
Calcium D-pantothenate	4
Riboflavin	0.8
Thiamine HCl	0.5
Pyridoxine HCl	0.5
Folic acid	0.2
Biotin	0.04
Vitamin B ₁₂	0.003
Glucose , to make	1000

Statistics

1. Mean (x)

$$\bar{x} = \frac{\sum x}{N}$$

2. Standard Deviation (S.D.)

$$S.D. = \sqrt{\frac{\sum (x - \bar{x})^2}{N-1}}$$

3. Analysis of Variance (ANOVA)

Source of Variation	d.f.	SS	MS	VR
Among groups (Treatment)	k - 1	SS _{among}	MS _{among} = SS _{among} / (k-1)	VR = MS _{among} / MS _{within}
Within groups (Error)	N - k	SS _{within}	MS _{within} SS _{within} / (N-k)	
Total	N - 1	SS _{total}		

ศูนย์วิทยทรัพยากร
จุฬาลงกรณ์มหาวิทยาลัย

d.f. = degree of freedom

SS = Sum of Squares

$$SS_{among} = \sum_{j=1}^k n_j (\bar{x}_{..j} - \bar{x}..)^2$$

$$SS_{within} = \sum_{j=1}^k \sum_{i=1}^k (x_{ij} - \bar{x}_{..j})^2$$

$$SS_{total} = \sum_{j=1}^k \sum_{i=1}^k (x_{ij} - \bar{x}..)^2$$

MS = Mean Square
 VR = Variance Ratio
 whereas X_{ij} = Observed Value at Treatment j
 $i = 1, 2, \dots, n$
 $j = 1, 2, \dots, k$

$$T_j = \sum_{i=1}^{n_j} X_{ij} \quad \bar{X}_j = \frac{T_j}{n_j}$$

$$T.. = \sum_{j=1}^k T_j \quad \bar{X}.. = \frac{T..}{N}$$

$$N = \sum_{j=1}^k n_j$$

Comparing the VR value with the critical value F obtained from table at degree of freedom (k - 1) and (N - k) :

- If $VR > F_{\text{table}}$, we reject the null hypothesis that $u_1 = u_2 = u_3 = u_4 \dots = u_k$ and accept the alternative hypothesis.
- If $VR < F_{\text{table}}$, the null hypothesis stands.

4. Honestly Significant Difference Test (HSD Test)

$$HSD = q_{\alpha, k, N-k} \sqrt{\frac{MSE}{n}}$$

whereas α = significant level
 k = number of treatments
 n = sample sizes of each treatment
 MSE = mean square of error from ANOVA table

Value q obtained from table at degree of freedom k and (N-k) and HSD obtained from calculation.

If the difference between treatment means (absolute value) of each pair of treatments is more than HSD value, therefore, this test finds this pair of treatments to be significantly different.

5. Paired Comparisons

$$t = \frac{d - \mu_d}{s_d}$$

$$s_d = s_d / n$$

$$d = d_i / n$$

Table 10 Analysis of Variance for Protein Efficiency Ratio

SOURCE OF VARIATION	DF	SS	MS	VR
AMONG GROUPS	2	.6498871	.3239435	1.744871
WITHIN GROUPS	27	5.028152	.1862279	
TOTAL	29	5.67804		

$F_{.95}(2,27) = 3.35$; p-value > 0.05, not significant

Table 11 Analysis of Variance for Net Protein Ratio

SOURCE OF VARIATION	DF	SS	MS	VR
AMONG GROUPS	2	1.929016	.9645081	1.823007
WITHIN GROUPS	27	14.28503	.5290753	
TOTAL	29	16.21405		

$F_{.95}(2,27) = 3.35$; p-value > 0.05, not significant

Table 12 Paired Comparisons between low lactose group and Lactose group

Paired Comparisons	d.f	t - distribution	
CPER	9	1.0306	NS *
RNPR	9	1.5550	NS
TD	9	0.9127	NS
BV	9	1.8074	NS
NPU	9	0.0746	NS

$t_{.95(9)}$ = 1.8331

NS = not significant
