* Deviation (%) which compared with average reference experiment

Table 16A Slope and y-Intercept for Standard Curves of Various Compounds

Compounds	Slope	y-Intercept
Toluene	1.04556	-0.10292
Quinoline	0.68255	0.00302
1, 2, 3, 4-THQ	0.62834	0.00473
DHQ	0.56896	0.00657
OPA	0.56692	-0.00333
PCH	0.73151	0.00860
PB	0.84949	0.00388

* Weight of various compounds is calculated by

Weight of compound =

$$\frac{[(\text{compound/standard} - c) / m] \times mi \times 100 \times ms}{\rho \times v}$$

where

- compound/internal = ratio peak area of compound to internal standard
- c = y-intercept
- m = slope
- mi = weight of internal standard (g)
- ms = sample weight (g)
- ρ = sample density (g/cc)
- v = sample volume which used for mixing with internal standard (cc)

VITA

Ponsak Pongponpriwon was born on October 18, 1968 in Nakhonsawan, Thailand. He received his Bachelor of Science Degree in Food Science and Technology from the Faculty of Agriculture at Chiang Mai University in 1991.
