Appendix A

The Upper Gulf of Thailand database

The database of the Upper Gulf of Thailand was separated two different groups. First, the oceanography database includes hydrology, chemistry, other observations in the Upper Gulf and loads from terrestrial that drain into the Upper Gulf. Second, the weather database includes the information about meteorological observations around the Upper Gulf of Thailand. Their structure is the following table:

- The master table of oceanography contains information on where, when, and by whom the samples were taken.

Stations:

Field Name	Field Type
ID	N*
LAT	N
LON	N
SQDEG	N
WDEPTH	N
DAY	N
MONTH	N
YEAR	N
TIME	N
STNNO	A30
GROUP	A30

- The different detail tables of oceanography include all information of the Upper Gulf of Thailand (for example hydrological, chemical, state of sea, etc.).

Hydro:

Field Name	Field Type
ID	N*
OBSDEP	N*
DEPCODE	N
QOBSDEP	N
TEMP	N
QTEMP	N
SALIN	N
QSALIN	N
SALIN_MET	N
OXYGEN	N
QOXYGEN	N
DENSITY	N
QDENSITY	N

This table contains the hydrological information of the Upper Gulf of Thailand.

Chem:

Field Name	Field Type
ID	N*
OBSDEP	N*
QOBSDEP	N
PO4P	N
QPO4P	N

Appendix A (continued)

Chem: (continued)

TOTP		N
QTOTP		N
NO2N		N
QNO2N		N
NO3N		N
QNO3N		N

This table contains the chemical information of the Upper Gulf of Thailand.

Chlor:

Field Name		Field Type
ID		N*
OBSDEP		N*
QOBSDEP		N
CHL		N
QCCHL		N

This table contains the Chlorophyll information of the Upper Gulf of Thailand.

pH:

Field Name		Field Type
ID		N*
OBSDEP		N*
QOBSDEP		N
PH		N
QPH		N

This table contains pH data of the Upper Gulf of Thailand.

Statesea:

Field Name		Field Type
ID		N*
Air Pressure		N
Air Temp		N
Wind Speed		N
Wind Dir		N
Current Speed		N
Current Dir.		N
SignWavHgt		N
Waveper		N
Color		N

This table contains the state of sea and color information of the Upper Gulf of Thailand.

Oxylight:

Field Name		Field Type
ID		N*
OXYSAT		N
Att. coeff. blue		N
Att. coeff. green		N
Att. coeff. red		N
Gamma rd. 1st region		N
Gamma rd. 2nd region		N
Gamma rd. 3rd region		N

Appendix A (continued)

Oxylight: (continued)

Gamma rd. 4th region | N

This table contains the light and oxygen saturation information of the Upper Gulf of Thailand.

Units:

Field Name	Field Type
GROUP	A20
COMPLETE NAME	A70
TEXTCODE	A20
VARIABLE	A38
UNITS	A22
METHOD	A90

This table includes abbreviated and completed group name that provided data, text code (TEMP, PO4, OXYGENSAT, etc.), variable code (temperature, phosphate, % oxygen saturation, etc.), units ($^{\circ}\text{C}$, $\mu\text{g-at/l}$) and methods that were used.

River:

Field Name	Field Type
RIVER	A20
YEAR	N
MONTH	N
FLOW (MCM.)	N
NO2 (mg/l)	N
NO2ld (Kg.)	N
NO3 (mg/l)	N
NO3ld (Kg.)	N
NH3 (mg/l)	N
NH3ld (Kg.)	N
TKN (mg/l)	N
TKNld (Kg.)	N
ORGN (mg/l)	N
ORGNld (Kg.)	N
PO4 (mg/l)	N
PO4ld (Kg.)	N
TOTP (mg/l)	N
TOTPld (Kg.)	N

This table contains the riverborne nutrient loads of the major rivers that drain into the Upper Gulf of Thailand.

Runoff:

Field Name	Field Type
Year	N
Month	N
RUNOFF MAE KLONG (MCM.)	N
RUNOFF CHOA PRAYA (MCM.)	N
RUNOFF NAKHON NAYOK (MCM.)	N
RUNOFF PACHIN (MCM.)	N
RUNOFF THA CHIN (MCM.)	N
RUNOFF BANGPAKONG (MCM.)	N

This table contains the freshwater runoff information of the major rivers that drain into the Upper Gulf of Thailand.

Appendix A (continued)

- The master table of the weather contains information on where, when, and by whom the observations were made.

Station:

Field Name	Field Type
ID	N*
Station	A22
Province	A21
Year	N

- The different detail tables of the weather include cloud, dry and wet bulb temperature, evaporation, rainfall, sunshine duration and wind direction observations around the Upper Gulf of Thailand.

Mcloud:

Field Name	Field Type
ID	N*
Jan	N
Feb	N
Mar	N
Apr	N
May	N
Jun	N
Jul	N
Aug	N
Sep	N
Oct	N
Nov	N
Dec	N
Annual	N

This table contains the cloud information.

Mdry-x-n:

Field Name	Field Type
ID	N*
Month	N*
Mean	N
Daymax	A9
Maximum	N
Daymin	A9
Minimum	N
AnnualMean	N
AnnualMax	N
Yeardaymax	A9
AnnualMin	N
Yeardaymin	A9

This table contains the dry bulb temperature information.

Mevap:

Field Name	Field Type
ID	N*
Jan	N
Feb	N

Appendix A (continued)

Mevap: (continued)

Mar		N
Apr		N
May		N

Appendix B (continued)*Script Timeseries*

There is a script called Timeser that you can use to extract time series for a specific station or co-ordinate interval, and use with the TS&CS program. When you run it, first you have to choose the parameter that you want to include (temp, salinity or any other).

You get the following menu:

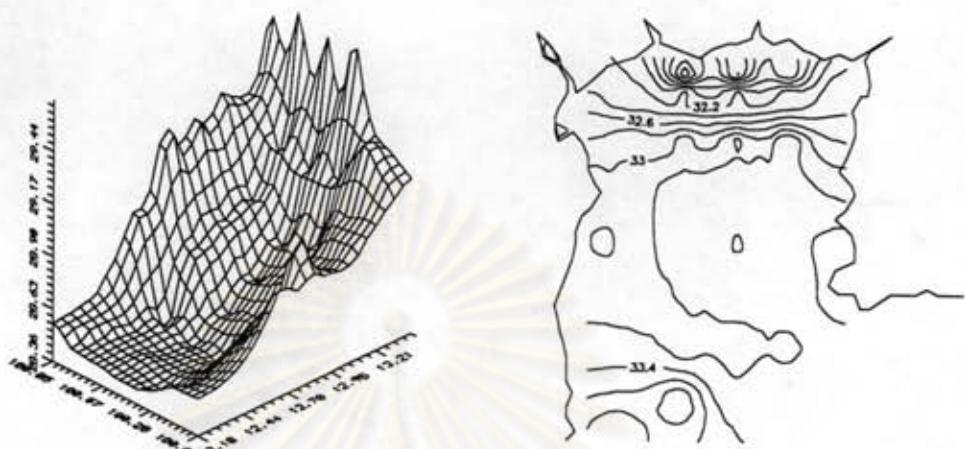

Choose one number: 1=sal, 2=temp, 3=OXYGEN, 4=PO4P,
5=TOTP, 6=SIO4(not avail.), 7=NO3N, 8=NO2N, 9=NH4N (not avail.),
10=TOTN (not avail) or 11=EXIT

The script extracts the information from the database (Date, Time, Obsdep and a specific parameter), then it creates the Day, Month and Year columns and adapts the Time column. If time is missing, then it is replaced by zero. The user can sort the answer table by date, time and depth and then to export and use the time series options from the TS&CS program, directly.

Appendix B (continued)

Script Surfer

Maybe you would like to run the Surfer program to create 3d surface diagrams or contour plots like:

In this case, you have to run a query like the next one (you get this if you run the script surfer1):

Stations	ID	LAT	LON	MONTH	YEAR
	_id	Check not blank	Check not blank	3	1993
Hydro	ID	OBSDEP	SALIN	QSALIN	
	_id	0	Check	not 0	

What you are doing is to get LAT, LON, and a parameter like Salinity for a date and depth that you chose. The answer table will include LAT, LON and Salinity.

Next step is to run surfer2 to adapt the co-ordinates to the Surfer program in the next way:

Restructure the answer table to create the new fields QLAT and QLON and make the following calculations:

```
QLAT=INT(LAT/100)+(LAT-INT(LAT/100)*100)60
QLON=INT(LON/100)+(LON-INT(LON/100)*100)60
```

Now you can export the answer table as a WK1 file with the fields QLAT, QLON and Salinity and runs The Surfer program to draw 3d surface diagrams or contour plot.

Appendix B (continued)

Script Askthai

If you would like to extract some information from the database to do something. You can run askthai script to extract the information that you want. When you run this script, you get the following menu:

GULF OF THAILAND DATABASE

MENU

1. Hydrology and chemistry
2. Oxygen sat. and light
3. River loads
4. Runoff
5. State of the Sea
6. EXIT

Type the number that corresponds to the subject you want to check. There will be several linked tables. Use DOWN or UP IMAGE to select any table and type your queries. If you want to remove any of them select it first and then press F8.

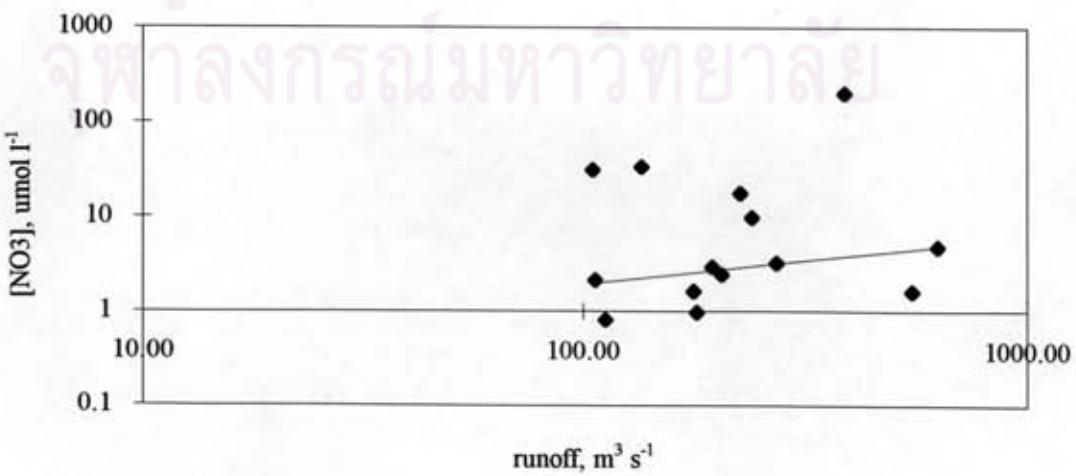

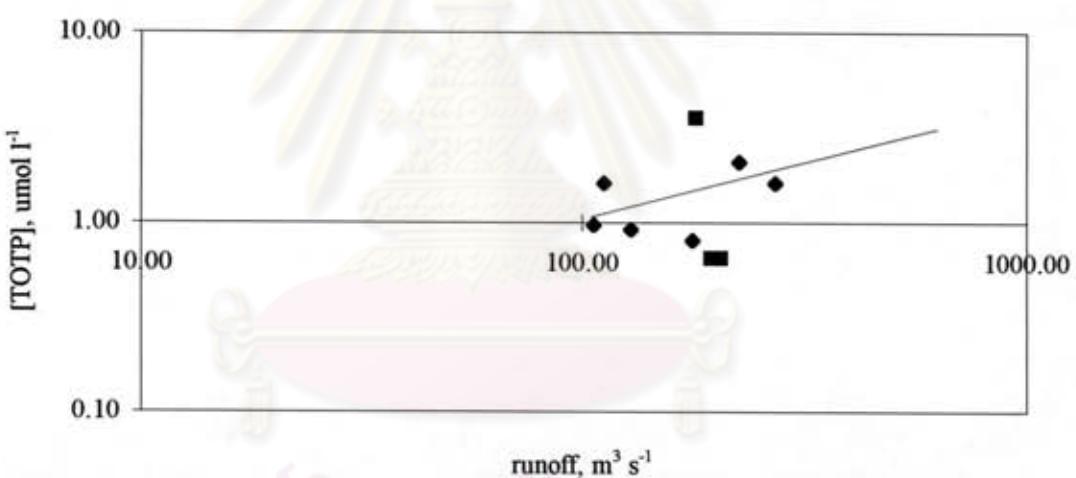

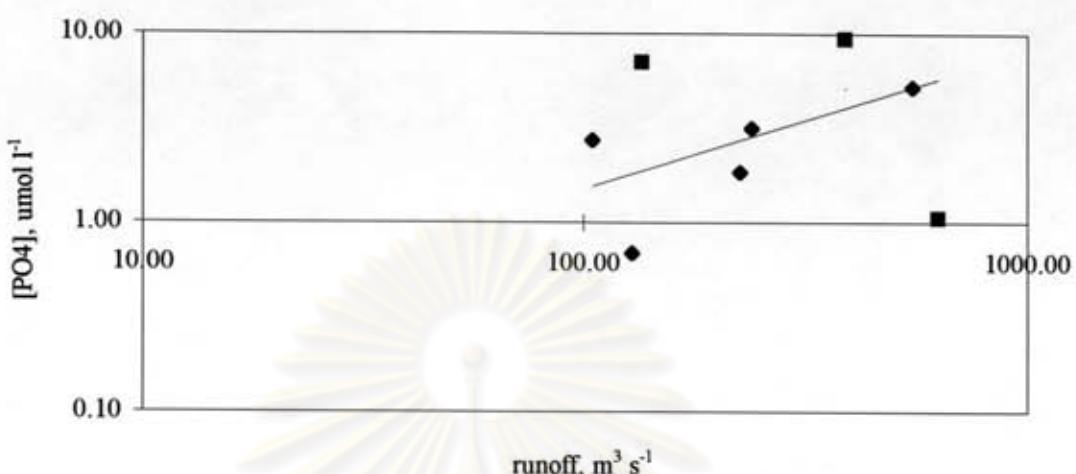

First, you have to choose the item that you want from the menu. Next step, the script will link that item with the station table. The last, when you get the queries, you can ask specified information that you want by checked marked at those fields.

Maybe you would like to run the TS&CS program to draw transect plot, you must have the table that contains LAT, LON, OBSDEP and specific parameter (use askthai script to extract this table). Then, you export the table to WK1 file and change to text file. When you have the text file already, you can run the TS&CS program to draw transect plot.

BIOGRAPHY

Miss Teeraporn Wiriyutikorn was born on July, 17 1971 in Bangkok, Thailand. She received her bachelor degree of Science in Environmental Science from Faculty of Science and Technology, Thammasat University, Bangkok, Thailand, in 1992. After graduation, she has continued her advanced study at Inter-Department of Environmental Science, Graduate School, Chulalongkorn University. She also received postgraduate scholarship from Pollution Control Department, Ministry of Science Technology and Environment. At the present, she works as a environmentalist in the Pollution Control Department of Thailand.
