พิมพ์พร แจ่มเวหา: การจำลองเตาถลุงขั้นต้นในกระบวนการถลุงทองแดง (SIMULATION OF A PRIMARY SMELTING REACTOR IN COPPER SMELTING PROCESS) อ. ที่ปรึกษา: อ. ดร. อมรชัย อภรณ์วิชานพ, 100 หน้า.

งานวิจัยนี้มุ่งเน้นที่การศึกษาผลของพารามิเตอร์การดำเนินงานที่มีต่อสมรรถนะเตาถลุงขั้นต้นในกระบวนการถลุงทองแดง แบบจำลองของเตาถลุงขั้นต้นได้ถูกพัฒนาโดยใช้โปรแกรมเมทซิม (METSIM) ค่าพารามิเตอร์ที่ใช้ในแบบจำลองเตาถลุงขั้นต้น ได้แก่ ความร้อนสูญเสีย การกระจายเฟสของของไหลในเตา เช่น ไวท์เมทัล (white metal) สแลก (slag) และก๊าซ และค่าขอบเขตของการเกิดปฏิกิริยา ได้จากการประมาณค่าโดยใช้ข้อมูลจากโรงงาน ผลการคำนวณที่ได้จากแบบจำลองถูกนำไปตรวจสอบกับข้อมูลจริงที่ได้จากโรงงานและพบว่าสอดคล้องกับข้อมูลที่ได้ แบบจำลองเตาถลุงที่ได้ถูกนำไปใช้ในการศึกษาผลของค่าพารามิเตอร์ต่างๆ ได้แก่ อัตราการไหลของหัวแร่ทองแดง (copper concentrate) ออกซิเจน อากาศ ซิลิกา และรีเวิร์ท (Revert) ที่มีต่อสมรรถนะของเตาถลุงโดยพิจารณาจากค่าเปอร์เซ็นต์ทองแดงในไวท์เมทัลและ สแลก เปอร์เซ็นต์แมกนีไทต์และซิลิกาในสแลก และอุณหภูมิภายในเตา นอกจากนี้ยังศึกษาผลกระทบของการเปลี่ยนแปลงองค์ประกอบทางเคมีของหัวแร่ทองแดงที่มีต่อสมรรถนะของเตาถลุงขั้นต้น

PIMPORN CHAMVEHA: SIMULATION OF A PRIMARY SMELTING REACTOR
IN COPPER SMELTING PROCESS. THESIS ADVISOR: AMORNCHAI
ARPORNWICHANOP, D.Eng., 100 pp.

The present research is focused on the study of the effect of operating parameters on the performance of a primary smelting reactor (PSR) in a copper smelting process. The model of the PSR is developed by using METSIM program. Reactor parameters, i.e., heat loss, phase distributions of white metal, slag and gas, and the extent of reactions, are estimated based on actual plant data. The model prediction is validated with plant data and a good agreement is observed. The developed model is used for investigating the effect of various parameters such as feed rates of copper concentrate, oxygen, air, silica flux and revert, on the performance of the PSR in terms of the percentage of copper in white metal and slag, the percentage of magnetite and silica in slag and the temperature of the PSR. In addition, the influence of the variation of chemical contents in copper concentrate on the reactor performance is also investigated.

ACKNOWLEDGEMENTS

The author would like to express her sincere gratitude to her advisor, Dr. Amornchai Apornwichanop, for his valuable suggestions, encouragement and useful discussion throughout this research and his devotion to revise this thesis. In addition, the author would also be thankful to Professor Piyasan Praserttham, as the chairman, Associate Professor Paisan Kittisupakorn and Dr. Suphot Phatanasri, as the members of the thesis committee.

The author would like to thank Thai Copper Industries Public Co. Ltd for giving the technical process data used in the study. The supports from Romeo U. Pagador D.Eng., Thai Copper Plant Manager, are gratefully acknowledged. The author is also grateful to the members of the Process Engineering and Production Department, Thai Copper Industries Public Co. Ltd. for their assistance.

The financial supports from the Thailand Research Fund (TRF) and the Office of Small and Medium Enterprises Promotion (OSMEP), and the graduate school of Chulalongkorn University are also gratefully acknowledged.

Finally, the author would like to express the highest gratitude to her parent and family for their love, inspiration, encouragement and financial support throughout this study.
