APPENDIX D

Digestion Procedure for Metal in Leachate by Ethos Sel Installation

APPENDIX D

Digestion Procedure for Metal in Leachate by Ethos Sel Installation

This method provides for the acid digestion of the Wastewater II in a closed vessel device using temperature control microwave heating for the metal determination by spectroscopic methods.

Microwave Equipment

Milestone ETHOS PLUS labstation with HPR-1000/10S high pressure segmented rotor.

Sample Amount Up to 1000 Watt

5 grams

Reagents

6 mL of HNO₃ 65%, 3 ml of HCL 36% and 0.25 Ml of H₂O₂ 30%.

Procedure

1. Place a TFM vessel on the balance plate, tare it and weigh 5 grams of sample.
2. Introduce the THM vessel into the HTC safety shield.
3. Add the acids; if part of the sample stays on the inner wall of the TFM vessel, wet it by adding acids drop by drop, then gently swirl the solution to homogenize the sample with the acids.
4. Close the vessel and introduce it into the rotor segment, then tighten by using the torque wrench.
5. Insert the segment into the microwave cavity and connect the temperature sensor.
6. Run the microwave program to completion.
7. Cool the rotor by air or by water until the solution reaches room temperature.
8. Open the vessel and transfer the solution to a marked flask.

Microwave Program

Step	Time	Temperature	Microwave power
1	10 minutes	200°C	Up to 1000 Watt
2	20 minute	200°C	Up to 1000 Watt

APPENDIX G

Computation of water and heavy metal loading into the reactors

APPENDIX G

Computation of water and heavy metal loading into the reactors.

1. Volume of water in the system

Moisture content = 90%

Weight of waste = 20 kg

$$\therefore \text{volume of water} = 20 \times (90/100) = 18 \text{ L}$$

2. % of field capacity in system

Weight of waste = 20 kg

Water = 18 L

solid waste = 2 kg

sludge seeding = 1 L

leachate (first day) = 3.8 L

$$\therefore \text{Total water in system} = (18+1) - 3.8 = 15.2 \text{ L}$$

$$\therefore \% \text{ of field capacity in system} = (15.2/20) \times 100$$

$$= 76\%$$

3. Leachate recirculation shift phase condition

Volume of water in system = 18 L

$$\therefore 5\% \text{ of available moisture} = 18 \times (5/100)$$

$$= 0.9 \text{ L}$$

$$\therefore 15\% \text{ of available moisture} = 18 \times (15/100)$$

$$= 2.7 \text{ L}$$

$$\therefore 25\% \text{ of available moisture} = 18 \times (25/100)$$

$$= 4.5 \text{ L}$$

4. Masses of the selected heavy metals loadings into the reactors.

Allowable amount according to Turkish Hazardous Waste Control Regulation
 $= 100 \text{ g/t MSW (Ni, Zn)}$

Weight of solid waste = 20 kg

\therefore Allowable amount of heavy metals in system = 2 g

Amount of Metal salt will be loaded in reactor

Atomic weight of Ni = 58.69

Atomic weight of $\text{NiCl}_{26}\text{H}_2\text{O}$ = 237.59

Allowable amount of heavy metals in system = 2 g

$\therefore \text{NiCl}_{26}\text{H}_2\text{O}$ will be used in reactor = $(237.596/58.69) \times 2$

$$= 8.09 \text{ g}$$

Atomic weight of Zn = 65.38

Atomic weight of ZnCl_2 = 136.286

Allowable amount of heavy metals in system = 2 g

$\therefore \text{ZnCl}_2$ will be used in reactor = $(136.286/65.38) \times 2$

$$= 4.16 \text{ g}$$

BIOGRAPHY

Miss Patummart Chewha was born on Dec 11, 1979 in Nakornprathom Province, Thailand. She graduated from Mahidol Vidyayanusorn School in Nakornpathom in 1998. She received her Bachelor's Degree in Environmental Science Technology from Faculty of Science, Sirinthon International Institute of Technology, Thammasart University in 2002. She pursued her Master Degree study in the International Postgraduate Programs in Environmental Management, Inter-Department of Environmental, Chulalongkorn University, Bangkok, Thailand in May 2002. She finished her Master Degree of Science in Environment Management in May 2004.
