## APPENDIX B

### Experimental Data of Semi-Batch Process

#### APPENDIX B.1

#### Effect of flow rate and crystallizer height on the precipitation

##### Definition

1.  $[\text{CrO}_4^{2-}]_{\text{solid}}$   
= Analytical result of chromate in the solid particle in the overflow solution
2.  $[\text{CrO}_4^{2-}]_{\text{total}}$   
= Total chromate concentration in the overflow solution
3.  $[\text{CrO}_4^{2-}]_{\text{supernatant}}$   
= Chromate ion concentration
4.  $[\text{CrO}_4^{2-}]_{\text{solid(c)}}$   
= Calculation of chromate concentration in  $\text{BaCrO}_4$  particle  
It was used to report in result and discussion.  
=  $[\text{CrO}_4^{2-}]_{\text{total}} - [\text{CrO}_4^{2-}]_{\text{supernatant}}$
5. %  $\text{CrO}_4^{2-}$   
= Chromate ion concentration in supernatant at the outlet relative to initial chromate concentration in the feed inlet  
=  $[\text{CrO}_4^{2-}]_{\text{supernatant}} / [\text{CrO}_4^{2-}]_{\text{initial}} \times 100$
6. %  $\text{CrO}_4^{2-}$  in  $\text{BaCrO}_4$   
= The ratio of chromate concentration in precipitate in the overflow to chromate concentration in feed  
=  $[\text{CrO}_4^{2-}]_{\text{solid(c)}} / [\text{CrO}_4^{2-}]_{\text{initial}} \times 100$
7. % Barium excess  
= The ratio of barium ion in the supernatant to barium in feed  
=  $[\text{Ba}^{2+}]_{\text{supernatant}} / [\text{Ba}^{2+}]_{\text{initial}} \times 100$

## APPENDIX C

### Experimental Data of Continuous Process

#### APPENDIX C.1

#### Effect of flow rate and crystallizer height on the precipitation

##### Definition

1.  $[CrO_4^{2-}]_{solid}$  = Analytical result of chromate in the solid particle in the overflow solution
2.  $[CrO_4^{2-}]_{total}$  = Total chromate concentration in the overflow solution
3.  $[CrO_4^{2-}]_{supernatant}$  = Chromate ion concentration
4.  $[CrO_4^{2-}]_{solid(c)}$  = Calculation of chromate concentration in BaCrO<sub>4</sub> particle  
It was used to report in result and discussion.  
=  $[CrO_4^{2-}]_{total} - [CrO_4^{2-}]_{supernatant}$
5. % CrO<sub>4</sub><sup>2-</sup> = Chromate ion concentration in supernatant at the outlet related to initial chromate concentration in the feed inlet  
=  $[CrO_4^{2-}]_{supernatant} / [CrO_4^{2-}]_{initial} \times 100$
6. % CrO<sub>4</sub><sup>2-</sup> in BaCrO<sub>4</sub> = The ratio of chromate concentration in precipitate in the overflow to chromate concentration in feed  
=  $[CrO_4^{2-}]_{solid(c)} / [CrO_4^{2-}]_{initial} \times 100$
7. % Barium excess = The ratio of barium ion in the supernatant to barium in feed  
=  $[Ba^{2+}]_{supernatant} / [Ba^{2+}]_{initial} \times 100$

2.5	0.01	0.01	0.01	0.01

$$\% \text{CrO}_4^{2-} = ([\text{CrO}_4^{2-}]_{\text{supernatant}} / [\text{CrO}_4^{2-}]_{\text{initial}}) \times 100$$

## CURRICULUM VITAE

**Name** : Ms.Pornkamol Plianpao

**Birth Date** : August 19, 1974

**Nationality** : Thai

### **University Education :**

1992-1996 Bachelor's Degree of Chemical Engineering in  
Chemical Technology , Chulalongkorn University
