APPENDICES
APPENDIX A
ASSUMPTIONS, DEFINITIONS AND CALCULATION

To facilitate the calculations, some valid assumptions were made as follows:

1. All the gaseous behaviors obey the ideal gas law.
2. Pressure drop across the system is very small and can be negligible.
3. The pressure in the system equals atmospheric pressure (1 atm).
4. The temperature change due to the reactions is very small and can be negligible temperature.
5. The flow rate change across the reactor due to the variation in the gaseous composition during the reaction time is very small and is assumed to be negligible.

The total molar flow rate of the gaseous stream can be calculated from the following equation:

$$N = q \times \left(\frac{P}{R \times T} \right)$$

Where q = total volumetric flow rate (determine by using soap bubble meter)

P = total pressure of the system (1atm)

R = gas constant ($82.051 \text{ atm.ml.mol}^{-1}.\text{min}^{-1}.\text{K}^{-1}$)

T = absolute ambient temperature (K)

With this, the molar flow rate of each component can also be determined by multiplying its percent volume derived from the GC analysis with the total molar flow rate.

The conversion is generally defined as:

$$\% \text{ Conversion} = \frac{(\text{Mole reactant in} - \text{Mole reactant out})}{\text{Mole reactant in}} \times 100$$

The selectivity of each product is, however, strictly defined on the basis of the amount of carbon converted from the reactant into any specified products. In this case, the product selectivity is defined as follows:

$$\% C_P \text{ Selectivity} = \frac{P \times \text{Mole of } C_P \text{ produced}}{R \times \text{Mole of } C_R \text{ converted}} \times 100$$

where P = number of carbon atom in product

R = number of carbon atom in reactant

C_P = product that has carbon P atom

C_R = reactant that has carbon R atom

APPENDIX B
EXPERIMENTAL DATA

1. The absence of catalyst system

1.1 Ethane partial pressure

Table B.1 Ethane partial pressure on partial pressure of effluent gases at total flow rate 100 ml/min, gap width 1.3 cm, applied voltage 8,000 V and frequency 400 Hz

Ethane partial pressure(atm)	Partial pressure (atm)

CURRICULUM VITAE

Name: Ms. Pornpilai Viriyasiripongkul

Date of Birth: December 30, 1977

Nationality: Thai

University Education:

1995-1999 Bachelor Degree of Science in Chemical Engineering,
Chulalongkorn University
