UDOM TIPRARACH : THEORY OF HIGH T_c SUPERCONDUCTIVITY FROM GINZBURG'S Ψ -THEORY. THESIS ADVISOR : ASSOC. PROF. DR. KITT VISOOTTIVISETH, Ph.D. 126 PP.

We have studied the thermodynamic and electrodynamic properties for high T_c superconductors within the framework of a generalized Ψ -theory. Based on this theoretical result, we find that the temperature dependence of the coherence length, penetration depth, upper critical field and the lower critical field differs from that of conventional superconductors. Furthermore, we have also calculated the critical current density and parallel critical field for thin films of high T_c superconductors.

ACKNOWLEDGEMENTS

I would like to express my deeply felt gratitude to my advisor Associate Professor Dr. Kitt Visoottiviseth , who was especially helpful in guiding, advising, understanding and encouraging me throughout this work and also for preparing this thesis.

I am very much obliged to the thesis committee , Assistant Professor Dr. Pisistha Ratanavararaksa , Professor Dr. Virulh Sayakanit , Assistant Professor Dr. Chai-Hok Eab and Assistant Professor Dr. Mayuree Netenapit for their valuable construction , criticism and helpful suggestions ; Associate Professor Payong Tunsiri for help as a coordinator.

I would like to thank the Chulalongkorn University Alumni Association under the Royal Patronage of the King for the scholarship and the Department of Physics , Chulalongkorn University for the Teacher Assistantship.

Finally , I would like to extend my appreciation to my parents , who have given me the encouragement throughout the entire study.
