Narissara Arthiwet: Combined Steam Reforming of CO₂-

Containing Natural Gas and Partial Oxidation in a Multistage

Gliding Arc Discharge System 67 pp.

Thesis Advisors: Prof. Sumath Chavadej.

Keywords: Plasma/ Multistage gliding arc discharge/Applied voltage/ Input

frequency/ Natural gas/ CO2 reforming of methane/ Partial

oxidation

When commercially converting methane to synthesis gas, conventional catalytic processes require both high temperature and high pressure, resulting in high energy consumption and catalyst deactivation. Non-thermal plasma is considered a promising alternative technology for synthesis gas production because it can be operated in ambient conditions. In this research, the effect of stage number of multistage gliding arc discharge system on the process performance of combined steam reforming and partial oxidation of simulated natural gas was investigated. The simulated natural gas contained 70% methane, 5% ethane, 5% propane and 20% carbon dioxide. The experiments were carried out to investigate reactant conversions, product selectivities and yields, and power consumption by varying either residence time or stage number of plasma reactors, feed flow rate, hydrocarbons (HCs)/O₂ feed molar ratio and input voltage. An increase in stage number from 1 to 3 stages at a constant feed flow rate enhanced the reactant conversions, and H₂ yield with a reduction of energy consumption. The lowest energy consumption of 3.49×10⁻¹⁷ Ws per molecule of reactants converted or 2.04×10⁻¹⁷ Ws per molecule of hydrogen produced was obtained from 3 stages of plasma reactors at a residence time and feed flow rate of 4.11 s and 100 cm³/min, respectively.

บทคัดย่อ

นริสรา อาทิเวช : การรวมกระบวนการเปลี่ยนรูปด้วยใอน้ำของก๊าซธรรมชาติที่มี การ์บอนใดออกใชด์เป็นองค์ประกอบและการออกซิเดชันบางส่วนภายใต้ระบบพลาสมาประกาย ใฟฟ้าร่อนแบบหลายขั้นตอน (Combined Steam Reforming of CO₂-Containing Natural Gas and Partial Oxidation in a Multistage Gliding Arc Discharge System.) อ. ที่ปรึกษา : ศ. คร. สุเมธ ชวเคช 67 หน้า

ในทางการค้าการเปลี่ยนรูปก๊าซมีเทนให้เป็นก๊าซสังเคราะห์จะใช้กระบวนการแบบ ดั้งเดิมที่มีตัวเร่งปฏิกิริยานั้น เป็นกระบวนการที่ต้องใช้ความร้อนและความดันสูง ส่งผลให้การใช้ พลังงาน ใฟฟ้าสูงและเกิดการเสื่อมของตัวเร่งปฏิกิริยาเร็วขึ้น ระบบพลาสมาที่ ไม่ใช้ความร้อนถือ ว่าเป็นเทคโนโลยีทางเลือกสำหรับการผลิตก๊าซสังเคราะห์ เพราะระบบนี้สามารถปฏิบัติได้ได้ สภาวะบรรยากาศ ในงานวิจัยนี้ ระบบพลาสมาประกายไฟฟ้าร่อนแบบหลายขั้นตอนได้ถูก นำมาใช้ในการศึกษาผลกระทบของจำนวนเครื่องปฏิกรณ์ต่อการเกิดปฏิกิริยาของระบบการรวม กระบวนการเปลี่ยนรูปด้วยไอน้ำและการออกซิเคชันบางส่วนของก๊าซธรรมชาติจำลอง โดยที่ก๊าซ ธรรมชาติจำลองประกอบด้วย ก๊าซมีเทน 70%, ก๊าซอีเทน 5%, ก๊าซโพรเพน5%, และก๊าซ คาร์บอนไดออกไซด์ 20% ในงานวิจัยนี้ได้ดำเนินการเพื่อทำการศึกษาผลกระทบของตัวแปรต่างๆ ได้แก่ การเปลี่ยนแปลงของสารตั้งต้น, การเลือกเกิดของผลิตภัณฑ์, ค่าผลได้ของผลิตภัณฑ์, และ กำลังไฟฟ้าที่ใช้ โดยการเปลี่ยนค่าเวลาที่สารตั้งต้นอยู่ในเครื่องปฏิกรณ์ซึ่งสามารถควบคุมจาก จำนวนเครื่องปฏิกรณ์และอัตราการใหลของสารตั้งต้น, ค่าอัตราส่วนระหว่างใฮโดรคาร์บอนต่อ ออกซิเจน, และค่าความต่างศักย์ เมื่อเพิ่มจำนวนเครื่องปฏิกรณ์จาก 1 เครื่อง ไปเป็น 3 เครื่อง สำหรับระบบที่มีการควบคุมอัตราการไหลให้มีค่าคงที่ซึ่งช่วยปรับปรุงค่าการเปลี่ยนแปลงของสาร ตั้งค้น, ค่าผลได้ของผลิตภัณฑ์ รวมทั้งการลดลงของพลังงานไฟฟ้าที่ใช้ด้วย พลังงานที่ใช้ต่ำที่สุด คือ 3.49×10^{-17} วัตต์วินาทีต่อ โมเลกุลของสารตั้งค้นที่เปลี่ยนแปลงไป และ 2.04×10^{-17} วัตต์วินาที ต่อโมเลกุลของก๊าซไฮโครเจนที่ผลิตได้ ซึ่งได้รับค่านี้จากการทคลองที่ใช้เครื่องปฏิกรณ์จำนวน 3 เครื่อง สำหรับระบบนี้ควบคุมเวลาที่สารตั้งต้นอยู่ในเครื่องปฏิกรณ์ 4.11 วินาที และอัตราการไหล 100 ลกบาศก์เมตรต่อนาที

ACKNOWLEDGEMENTS

This thesis work would have never been possible without the assistance of the following persons and organizations:

First of all, I would like to express my deepest gratefulness and appreciation to Prof. Sumaeth Chavadej and Asst. Prof. Thammanoon Sreethawong, for all of their excellent guidance, useful recommendations, creative comments, intensive attention, and encouragement throughout the course of my work. They have not only taught me about the theoretical knowledge but also made me realize in myself that this research is very challenging. As well, they taught me in the better way of working life and working style.

I also would like to thank my present and former teacher from whom I learned and great deal about the knowledge in chemical engineering and petroleum technology.

I would like to express my sincere thank to the the Petroleum and Petrochemical College, and by the Center of Excellence on Petrochemical and Materials Technology, Thailand for providing the financial support for this thesis work.

I deeply appreciate C.P.O. Poon Arjpru, who assisted me to repair the experimental instrument and electrical parts. I would like to thank the Petroleum and Petrochemical College's staffs for their help in many aspects.

Special thanks go to Ms. Krittiya Pornmai and Mr. Atthaphol Jindanin for their valuable suggestions throughout this research work. I am also deeply indebted to Asst. Prof. Boonyarach Kitiyanan and Prof. Chaiyot Tangsathitkulchai for their kind advice and forbeing the thesis committee.

Finally, extreme appreciation is forwarded to my family and my friends for all their supports, understanding, constant encouragement, and cheerfulness during my studies and research work.
