

## CHAPTER V

### RESULTS

#### **1. Confirmation of *Salmonella* Schwarzengrund by Biochemical and Serological Tests**

The total numbers of 300 *Salmonella* Schwarzengrund isolates from human patients and chicken meat samples in Thailand during A.D. 2000-2002 which obtained from the National *Salmonella* and *Shigella* center, the National Institute of Health, Department of Medical Sciences, Thailand were confirmed by biochemical tests and serological test.

#### **2. Antimicrobial susceptibility of *Salmonella* Schwarzengrund**

2.1. Antimicrobial susceptibility test of all *Salmonella* Schwarzengrund isolates against ampicillin, gentamicin, streptomycin, sulfamethoxazole, sulfamethoxazole+trimethoprim, tetracycline, nalidixic acid, neomycin, ciprofloxacin, and chloramphenical by agar dilution method and cefotaxime and cefotaxime+clavulanic acid by disk diffusion method were shown in **Figure 4** and their MIC<sub>50</sub>, MIC<sub>90</sub> and MIC range are shown in **Table 12**. The results found that *Salmonella* Schwarzengrund were resistant to ampicillin (74%), gentamicin (67%), streptomycin (59%), sulfamethoxazole (85%), sulfamethoxazole +trimethoprim (77%), tetracycline (73%), neomycin (51%), nalidixic acid (96%), ciprofloxacin (16%), chloramphenical (16%). No cefotaxime and cefotaxime+clavulanic acid resistance was found.

2.2 Antimicrobial susceptibility test of all *Salmonella* Schwarzengrund isolated from human and from chicken meat samples against ampicillin, gentamicin, streptomycin, sulfamethoxazole, sulfamethoxazole+trimethoprim, tetracycline, nalidixic acid, neomycin, ciprofloxacin, and chloramphenical by agar dilution method was

compare as shown in **Figure 5** and their MIC<sub>50</sub>, MIC<sub>90</sub> and MIC range was shown in **Table 13**. The results showed that *Salmonella* Schwarzengrund isolated from human were resistant to ampicillin (34%), gentamicin (57%), streptomycin (18%), sulfamethoxazole (94%), sulfamethoxazole+ trimethoprim (79%), tetracycline (48%), nalidixic acid (98%), neomycin (4%), cipromethoxazole (31%), and chloramphenical (18%). The results of susceptibility test showed that *Salmonella* Schwarzengrund isolated from chicken meat samples were resistant to ampicillin (76%), gentamicin (65%), streptomycin (35%), sulfamethoxazole (99%), sulfamethoxazole+ trimethoprim (20%), tetracycline (67%), nalidixic acid (94%), neomycin (7%), ciprofloxacin (21%), and chloramphenical (14 %).

**2.3** Examining of multiple-drug resistant patterns of *Salmonella* Schwarzengrund isolated from human revealed that *Salmonella* Schwarzengrund from human-isolates were resistant to one antimicrobial drug (1.1%), two antimicrobial drug (13%), three antimicrobial drug (18%), four antimicrobial drug (25.4%), five antimicrobial drug (14.4%), six antimicrobial drug (11.1%), seven antimicrobial drug (14.4%), and eight antimicrobial drug (2.2%). While *Salmonella* Schwarzengrund isolated from chicken meat samples were found none resisted to one antimicrobial drug (0%), resisted to two antimicrobial drug (1.6%), three antimicrobial drug (17.5%), four antimicrobial drug (14.8%), five antimicrobial drug (36.5%), six antimicrobial drug (17.5%), seven antimicrobial drug (7.9 %), eight antimicrobial drug (2.1 %), and nine antimicrobial drug (2.1%).(**Figure 6**)

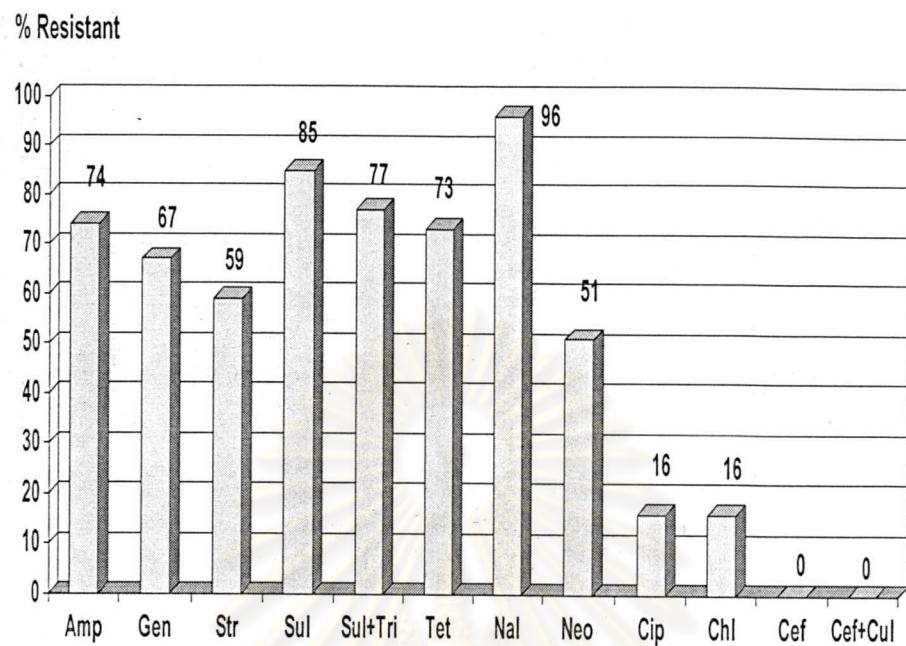

**2.4** Patterns of antimicrobial susceptibility test of all *Salmonella* Schwarzengrund isolated in A.D. 2000, 2001, and 2002 against ampicillin, gentamicin, streptomycin, sulfamethoxazole, sulfamethoxazole+trimethoprim, tetracycline, nalidixic acid, neomycin, cipromethoxazole, and chloramphenical by agar dilution method were shown in **Figure 7**. The results revealed that *Salmonella* Schwarzengrund isolates in 2000 were resistant to ampicillin (74%), gentamicin (68%), streptomycin (0%), sulfamethoxazole (79%), sulfamethoxazole+ trimethoprim (63%), tetracycline (47%), nalidixic acid (95%), neomycin (0%), ciprofloxacin (11%), chloramphenical (96%), cefotaxime (0%) and cefotaxime+ culvulanic acid (0%). The results of susceptibility test of *Salmonella* Schwarzengrund isolated in 2001 were resistant to ampicillin (31%), gentamicin (90%), streptomycin (30%), sulfamethoxazole (87%), sulfamethoxazole+

trimethoprim (96 %), tetracycline (87%), nalidixic acid (97%), neomycin (30%), ciprofloxacin(30%), chloramphenical (92%), cefotaxime (0%) and cefotaxime+culvulanic acid (0%). In 2002, *Salmonella* Schwarzengrund isolates were resistant to ampicillin (70%), gentamicin (45%), streptomycin (17%), sulfamethoxazole (63%), sulfamethoxazole+ trimethoprim (57%), tetracycline (45%), nalidixic acid (98%), neomycin (17%0, ciprofloxacin (6%), chloramphenical (60%), cefotaxime (0%) and cefotaxime+culvulanic acid (0%).

## **2. Analysis of restricted fragments of chromosomal DNA from *Salmonella* Schwarzengrund by Pulsed-Field Gel Electrophoresis (PFGE)**

Three-hundred isolates of *Salmonella* Schwarzengrund from human patients and chicken meat samples were analyzed their DNA-patterns by Pulsed-Field Gel Electrophoresis (PFGE). The DNA-pattern analysis was able to be characterized 2 genotypes which were named “Type A” ( $\leq$  60 % similarity) and “Type B” ( $\geq$  60 % similarity). The “Type B” can be characterized into 7 sub-genotypes which were Subtype B1 ( $\geq$  70 % similarity), Subtype B2 ( $\geq$  75 % similarity), Subtype B3 ( $\geq$  80 % similarity), Subtype B4 ( $\geq$  85 % similarity), Subtype B5 ( $\geq$  90 % similarity), Subtype B6 ( $\geq$  95c% similarity), and Subtype B7 ( $\geq$  100 % similarity). The most prevalent type in this study was type B. The results were able to clearly distinguishable the sizes of DNA fragments between 10 to 14 DNA fragments which ranging from 48 kbp to 679 kbp. The total DNA was prepared, and PFGE was perfomed as described previously. The restriction endonucleases *Xba* I were used at the manufacturer’s suggested temperature. Restriction endonuclease fragments were separated by PFGE on a 1% agarose gel in 0.5x TBE buffer with the Bio-Rad CHEF Mapper apparatus III. The ladder marker were applied as molecular size markers (size,48 to 1,000 kb, PFGE markers III). Gels were then stained with ethidium bromide and photographed under UV (Figure 8 and 9 illustrated examples of the chromosomal DNA fingerprints of one of human patients and chicken meat strain which were generated with *Xba*I digestion). The DNA-fragment patterns were compared and interpreted by using software (bionumeric). Similarity analysis and the dendograms had been done with this database system on the basis of molecular mass patterns. The

**Figure 10** showed example of DNA patterns which were subjected to be analyzed by using the Bionumeric software. The results and dendrogram from image-analysis revealed that *Salmonella* Schwarzengrund isolates from human patients and chicken meat samples were highly related, with similarity of coefficients were greater than 70 %. The results also showed that the isolates from susceptible and/or resistant to antimicrobial drugs contained the same or similar DNA profiles (**Figure 12**). The DNA profile of *Salmonella* Schwarzengrund was also proved its difference from *Salmonella* enteritidis (**Figure 11**) which was used as quality control organism in this study.

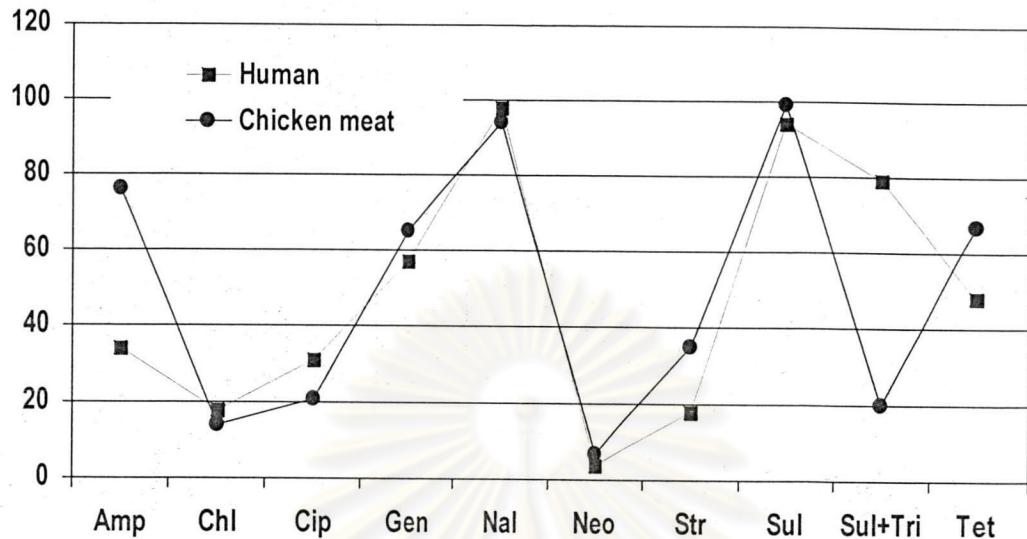

**Figure 4** Pattern of Antimicrobial resistant of *Salmonella* Schwarzengrund isolated from human patirnts and chicken meat samples in Thailand (2000-2002).

Amp = Ampicillin      Sul = Sulfamethoxazole      Nal = Nalidixic acid  
 Gen = Gentamicin      Sul+Tri = Sulfamethoxazole+Trimethoprim      Neo= Neomycin  
 Str = Streptomycin      Cef = Cefotaxime      Cip= Cipromethoxazole  
 Tet = Tetracycline      Cef+Cul=Cefotaxime+Culvulanic acid      Chl = Chloramphenicol

**Table 12** MIC<sub>50</sub>, MIC<sub>90</sub> and MIC range of *Salmonella* Schwarzengrund

Antimicrobial drug	MIC <sub>50</sub>	MIC <sub>90</sub>	MIC range
Ampicillin	128	128	2-128
Chloramphenicol	4	8	2-256
Ciprofloxacin	0.25	2	0.25-4
Gentamicin	32	64	2-128
