APPENDIX

Experimental data of microemulsion formation

1. Interfacial Tension (IFT)

The interfacial tension of each phase of microemulsion is interpreted by the following formulation:

$$IFT = e(Vd)^3 n^2 \Delta\rho$$

where

σ = interfacial tension or IFT (mN/m, dyne/cm)

e = unity factor (3.427×10^{-7} mN cm³ min² /m g mm³)

V = enlargement factor (0.31 mm/sdv)

d = measured drop diameter (sdv)

n = number of revolution (1/min)

$\Delta\rho$ = density difference of two liquids (g/cm³)

2. Experimental Data of Interfacial Tension (IFT)

2.1 Single Surfactant System

CURRICULUM VITAE

Name: Ms. Alweeya Lapee-e

Date of Birth: February 6, 1982

Nationality: Thai

University Education:

2000-2004 Bachelor Degree of Engineering in Chemical Engineering,
Faculty of Engineering, Mahidol University, Bangkok, Thailand.
